```
==========================
Version BaiBS_QRTB_2.7.8
--------------------------
```

New Features:
- Added: MOCN support
- Added: X2 support
- Added: ANR support
- Added: MME Pool S1 handover
- Added: PFS Scheduler
- Added: Dynamic TTI scheduling
- Added: 3UE/TTI
- Added: Dynamically change target UL SINR for UEs based on RSRP

Improvements:
- Improved: Display UE IMSIs on Overview page when LGW is disabled
- Improved: Display uptime on Overview page
- Improved: ICMP latency decreased in 96 UE mode
- Improved: Increase target UL BLER from 5 to 10%
- Improved: Lower power if eNB antenna is not detected (damage prevention)

Bug Fixes:
- Fixed: Importing configuration file from another eNB SN will reset license controlled features
- Fixed: Cannot access eNB webGUI when configured with CGNAT IP address
- Fixed: eNB may coredump when UEs are trying to attach and eNB is at max UE capacity
- Fixed: [HaloB] Cat12 CPE cannot attach when HaloB is enabled
- Fixed: [HaloB] eNB may not go Active after software upgrade when in Standalone mode
- Fixed: [KPI] Statistic error in number of handover requests
- Fixed: [KPI] Statistic error in ERAB count
- Fixed: [KPI] Statistic error in average UL PRB count
